8. (Currently Amended) An aircraft air conditioning system mixer comprising:
- a first tube having a passage extending between an inlet and an outlet; and
- a second tube at least partially surrounding said first tube forming a cavity, said first tube having a circumferential corrugation in said first tube forming at least one lobe fluidly connecting said first tube and said cavity, wherein multiple lobes are arranged about a circumference of said first tube with said lobes fluidly connecting said cavity and said passage, and an exit tube fluidly connected to said passage between said inlet and said outlet, and wherein said lobes comprise peaks and valleys defined by a sloped wall sloping from an inlet side toward an outlet side.
